ABOUT ME

Results-driven IT undergraduate passionate about solving real-world business problems through data. Proficient in Python, Power BI, SQL, and Scikit-learn, with hands-on experience building end-to-end solutions from ETL pipelines and BI dashboards to AI-powered systems. Proven ability to translate complex datasets into actionable business insights, demonstrated through delivering a 100K+ order analytics dashboard and an intelligent compliance system for a leading pharmaceutical organization. Currently developing a donor classification model using supervised learning techniques. Driven by the conviction that well-applied data creates measurable impact.

EDUCATION

BSc (HONS) IN INFORMATION TECHNOLOGY 2024 - Present
Department of Industrial Management | University of Kelaniya

PROJECTS

Donor Prediction System – ML Pipeline Development (Ongoing) Feb 2026 – Present

- Built an end-to-end data processing pipeline to ingest raw donor data (CSV/Excel), transform it into analysis-ready datasets, and integrate with downstream ML models
- Conducted data cleaning and preprocessing including missing value handling, duplicate removal, and inconsistency resolution across all pipeline stages
- Applied feature engineering and data scaling techniques to standardize numerical features and improve model usability
- Implemented K-Means clustering for donor segmentation, identifying behavioral patterns to support targeted decision-making

Tech: Python, Scikit-learn, Clustering, Classification, Regression, NumPy, Pandas, Matplotlib

Olist E-Commerce Sales Analytics Dashboard March 2026

- Ingested and integrated 9 relational datasets (~100K+ records) using Power Query, performing data cleaning and preprocessing by handling missing values, correcting inconsistencies, and standardizing data formats
- Applied data transformation techniques to reshape and merge datasets for unified analysis
- Designed a star schema data model to optimize relationships between fact and dimension tables
- Implemented a structured ETL workflow (Extract, Transform, Load) to ensure data quality, consistency, and reliability
- Developed DAX measures and calculated columns to support business queries on sales performance, customer behavior, and operations
- Built interactive Power BI dashboards to visualize insights and ensured data accuracy through validation checks and cross-table consistency analysis

Tech: Power BI, Power Query, DAX, Excel, ETL, Star Schema Modeling

Hemas PharmaComply AI – Automated Regulatory Compliance System (Group) Jan 2026

- Led development of the Impact Predictor module which matches real-time price changes to internal product catalogs and auto-generates actionable business plans
- Integrated and merged teammates' modules (Q&A, deadline tracker, risk evaluator, change detector) into a unified pipeline
- System features automated gazette sync, page-preserving OCR, and a RAG pipeline for citation-backed document Q&A

Tech: Python, LangChain, Groq (Llama 3), ChromaDB, HuggingFace Embeddings, Tesseract OCR, pypdfium2, Streamlit

SKILLS

Programming : Python (Pandas, NumPy, Scikit-learn, Matplotlib), Java, JavaScript
Data Analysis & Engineering : Data Cleaning, EDA, ETL, Data Transformation, Data Validation, Data Pipelines
Machine Learning : Scikit-learn, Classification, Regression, K-Means Clustering, Feature Engineering, Data Preprocessing
Data Visualization :Power BI (Advanced), DAX, Excel, Tableau (Familiar)
Databases : MySQL, MongoDB, ChromaDB, Relational Data Modeling
AI & GenAI : LangChain, RAG Pipelines, HuggingFace Embeddings, Groq (Llama 3), Streamlit

CERTIFICATION

Power BI: Dashboards for Beginners LinkedIn	Jan 2026
What is Data Science Coursera IBM	May 2025

EXTRA CURRICULAR

Detail Handler LED KLN Club University of Kelaniya	July 2025 - April 2026
Finalist (Top 25) AITHON 2026 Hemas Holdings	April 2026
Finalist (Top 5) Venture Verse 2025, Sabaragamuwa University	Dec 2025
Finalist (Top 10) Technopreneur Challenge, CodeFest 2025, SLIIT	Sep 2025
Finalist (Top 10) IdeaSprint 2025, University of Kelaniya	July 2025
